Satellite Broadband Internet Anywhere!

mSAT

What is mSAT?

mSAT is Maxis' Ku-band VSAT service that provides interactive broadband Internet Access anywhere in Malaysia. The mSAT antenna ranges from 84cm to 1.2m in size. mSAT's primary business focus is targeted towards serving the Small & Medium Enterprises ("SME") and rural enterprises ("RE"). Its value is best realised in areas without or with limited or unreliable broadband access. mSAT is specifically tailored to meet the various needs of the SME and offers subscribers affordable broadband services.

How does mSAT work?

Users gain access to the internet or intranet via the broadband enabled mSAT satellite modem which then establishes bi-directional (upload and download) asymmetrical or symmetrical communication with the mSAT hub and subsequently to the respective internet and intranet via leased line to the User's HQ.

To mitigate occasional rain-induced service interruptions, the mSAT network is designed with a primary and a back-up hub that will automatically switch into active operation to minimise outages.

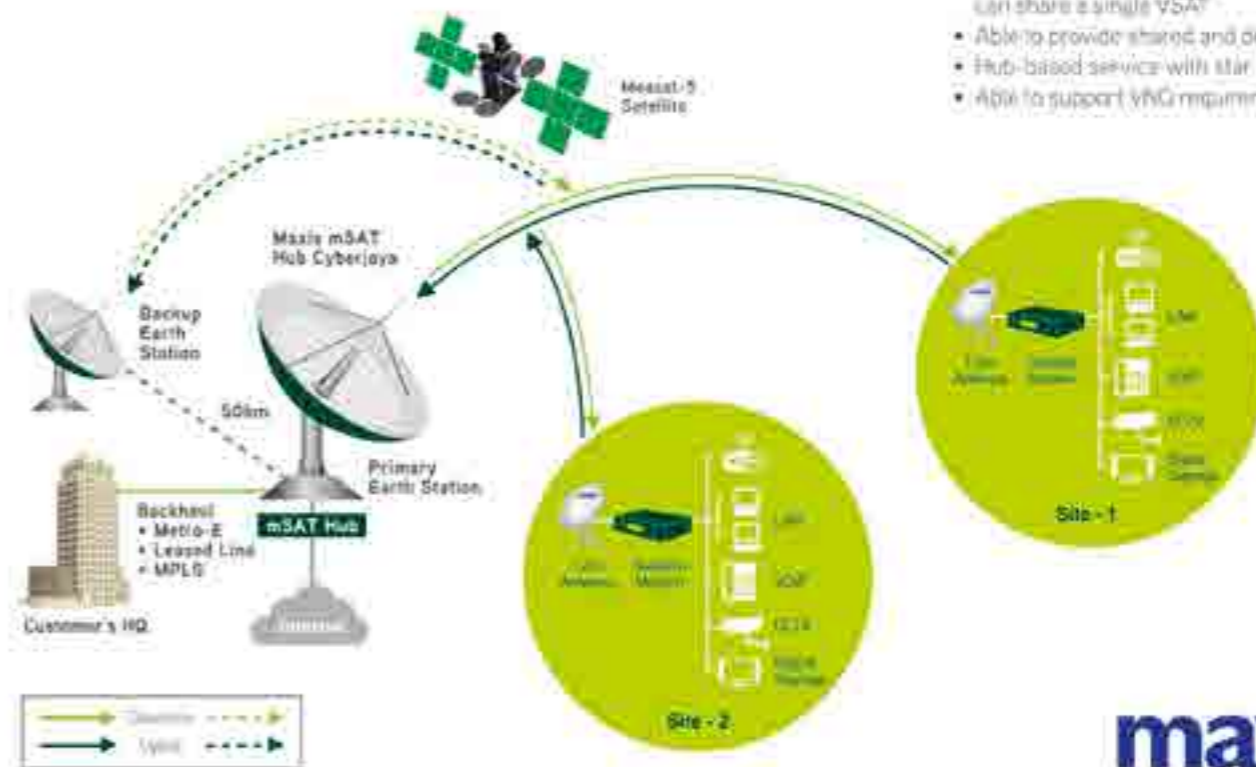

mSAT VSAT operates over Mosaic-5 satellite which has 6 spot beams across Peninsular and East Malaysia.

mSAT Coverage Spot Beams

Key Features of mSAT VSAT

- Uses a 1.2m Ku-band antenna

- Multiple VLANs per VSAT - multiple users can share a single VSAT
- Able to provide shared and dedicated links
